

CALIFORNIA COASTAL COMMISSION

South Coast Area Office
200 Oceangate, Suite 1000
Long Beach, CA 90802-4302
(562) 590-5071

Filed: 8/20/99
49th Day: 10/8/99
180th Day: 2/16/2000
Staff: AJP-LB
Staff Report: 12/15/1999
Hearing Date: 1/11-14/2000
Commission Action:

STAFF REPORT: REGULAR CALENDAR

APPLICATION NO.: 5-99-051

APPLICANT: City of Santa Monica

PROJECT LOCATION: Barnard Way frontage road at the south curve, adjacent to 3356 Barnard Way, in the City of Santa Monica.

PROJECT DESCRIPTION: After the fact permit for the establishment of a 24-hour preferential parking district for residents only with no parking or stopping any time without a permit and the erection of signs identifying the hours of the parking restrictions and demarcating the restricted areas (Zone P); and the provision of 154 replacement parking spaces.

LOCAL APPROVALS RECEIVED: Approval in Concept; City Council approval

SUBSTANTIVE FILE DOCUMENTS: Coastal Development Permits #5-96-221 (City of Santa Monica), #5-96-059 (City of Santa Monica), #5-90-989 (City of Los Angeles Dept. of Transportation), #5-91-498(Sanders); A-5-VEN-97-183 (City of Los Angeles; City of Santa Monica's certified LUP).

SUMMARY OF STAFF RECOMMENDATION:

Staff recommends approval of the preferential parking zone with special conditions requiring the City to: (1) provide and maintain a minimum of 154 replacement parking spaces; (2) continue to provide the Tide and Pier/Beach Shuttles during the summer months; (3) limit the authorization of the preferential parking restrictions approved by this permit to a five year time limit, at the end of which the applicant may reapply for a new permit to reinstate the parking program; (4) place the applicant on notice that any change in the hours or boundaries of the preferential parking zone will require Commission approval; and (5) condition compliance. As conditioned, to mitigate the adverse individual and cumulative impacts on public access and recreation, the project can be found consistent with the access and recreation policies of the Coastal Act.

STAFF NOTE

The issue in this application is public use of public streets for parking in order to use the beach and public recreation facilities. In recent years the Commission has received applications from local governments to limit public parking on public streets where there are conflicts between local residents and beach visitors, trail users and/or people seeking coastal views. The streets subject to the current application request for preferential parking are near the beach and Santa Monica's South Beach Park. The City of Santa Monica proposes to restrict all public parking on the street 24-hours a day. Residents along the affected street will be allowed to park on the street 24-hours a day by obtaining a parking permit from the City.

Public access, parking and recreation can result in impacts to neighborhoods that are not designed to accommodate visitors. In this case, the City of Santa Monica has stated that the residential streets within the zone have been impacted by coastal visitors. The City is proposing the parking restriction to address the conflict that occurs when there is a lack of on-site parking and use of the streets by non-residents.

In this particular case, staff recommends that the Commission allow parking limitations only as conditioned by this permit to allow the public an opportunity park on the public street and thereby protect public access to the beach. Because the Coastal Act protects coastal access and recreational opportunities, including jogging, bicycle and trail use, staff is recommending special conditions to ensure that the implementation of the hours will not adversely impact beach and recreational access. As conditioned by this permit, staff does not believe the proposal will adversely affect public access and public recreational opportunities.

This permit application is one of seven after the fact permit applications for residential preferential parking zones in the City of Santa Monica (see Exhibit 1 and 2). The seven zones represent a total of approximately 936 parking spaces.

Six zones are located south of Pico Boulevard, with one zone located one block north of Pico Boulevard. The City created the seven residential preferential parking zones between 1983 and 1989 (three zones were expanded to include additional streets in 1984, 1987 and 1990). All seven zones were created without the benefit of a Coastal Development Permit.

After being contacted by South Coast Commission staff and informed that a Coastal Development Permit would be required for the preferential parking zones the City filed an application for the seven preferential parking zones. The City, in their submittal letter, states that they would like to resolve the preferential parking zone violation matter administratively (see Exhibit 3). However, the City further states that the application is being filed under protest and they are not waiving their right to bring or defend a legal challenge. The City maintains that the Coastal Commission does not have regulatory authority over preferential parking zones within the coastal zone of Santa Monica. The City states that their position on this matter is based on four primary factors:

(1) the creation of preferential parking zones does not require coastal commission approval, (2) in 1983 when the zones were first created, the Coastal Commission confirmed that such zones were not subject to Commission approval, (3) the City has exclusive authority to establish preferential parking zones, and (4) preferential parking zones in Santa Monica do not restrict coastal access.

The staff do not agree with the City's position and staff's response to each of the City's contentions is addressed below in the following sections of this report.

The proposed project was scheduled for the January 1999 Commission hearing. However, the City withdrew the application in order to complete a parking and circulation study (Santa Monica Coastal Parking and Circulation Study, April 1999) and present staff with possible measures that would mitigate the loss of public parking where there was determined to be an adverse impact to public beach access.

The proposed project was again scheduled for Commission hearing in November 1999. However, the applications were postponed after Commission staff determined that portions of the on-street parking for two of the proposed seven districts were restricted as short-term public parking by prior Commission permit actions and that a staff recommendation of approval on two of the preferential parking district applications would be inconsistent with the Commission's previous permit actions. The City subsequently submitted two amendment applications to remove the restrictions imposed by the Commission in its previous actions and designate new parking in other nearby locations as short-term parking to replace the parking that was subject to the previous permits.

RECOMMENDATION:

Staff recommends that the Commission APPROVE the permit application with special conditions.

MOTION

I move that the Commission approve CDP #5-99-051 pursuant to the staff recommendation.

Staff recommends a YES vote. Passage of the motion will result in adoption of the following resolution and findings. The motion passes only by affirmative vote of a majority of the Commissioners present.

STAFF RECOMMENDATION:

The staff recommends that the Commission adopt the following resolution:

I. Approval with Conditions

The Commission hereby grants a permit for the proposed development, subject to the conditions below, on the grounds that, as conditioned, the development will be in conformity with the provisions of Chapter 3 of the California Coastal Act of 1976, will not prejudice the ability of the local government having jurisdiction over the area to prepare a Local Coastal program conforming to the provisions of Chapter 3 of the Coastal Act, is located between the sea and first public road nearest the shoreline and is in conformance with the public access and public recreation policies of Chapter 3 of the Coastal Act, and will not have any significant adverse impacts on the environment within the meaning of the California Environmental Quality Act.

II. Standard Conditions.

1. Notice of Receipt and Acknowledgment. The permit is not valid and development shall not commence until a copy of the permit, signed by the permittee or authorized agent, acknowledging receipt of the permit and acceptance of the terms and conditions, is returned to the Commission office.
2. Expiration. If development has not commenced, the permit will expire two years from the date this permit is reported to the Commission. Development shall be pursued in a diligent manner and completed in a reasonable period of time. Application for extension of the permit must be made prior to the expiration date.
3. Compliance. All development must occur in strict compliance with the proposal as set forth in the application for permit, subject to any special conditions set forth below. Any deviation from the approved plans must be reviewed and approved by the staff and may require Commission approval.
4. Interpretation. Any questions of intent or interpretation of any condition will be resolved by the Executive Director or the Commission.
5. Inspections. The Commission staff shall be allowed to inspect the site and the project during its development, subject to 24-hour advance notice.
6. Assignment. The permit may be assigned to any qualified person, provided assignee files with the Commission an affidavit accepting all terms and conditions of the permit.
7. Terms and Conditions Run with the Land. These terms and conditions shall be perpetual, and it is the intention of the Commission and the permittee to bind all future owners and possessors of the subject property to the terms and conditions.

III. Special Conditions.

1. Replacement Parking

The City shall provide and maintain a minimum of 154 replacement public parking spaces, as listed in exhibit 11 and depicted in exhibit 12, between the hours of 9:00 a.m. and 8:00 p.m. All street metered spaces located west of Neilson Way shall allow public parking for a minimum of 5-hours; all street metered spaces located east of Neilson shall allow public parking for a minimum of 2-hours; and all spaces within Neilson Way Public Parking Lot No. 9 shall allow public parking for a minimum of 3-hours.

2. Signage Plan

Prior to issuance of the Coastal Development Permit, the applicant shall submit for the Executive Director's review and approval, a parking signage program which reflects this approval. The Program shall include location, text and timing of installations of signs and identification and removal of any signs which are not in conformance with the approved parking program within 30 days of the issuance of this permit.

3. Shuttle Service

The City shall continue to operate the Tide Shuttle and Pier/Beach Shuttle during the summer months, between Memorial Day weekend and Labor Day weekend, consistent with the routes, times, and fares, as shown on Exhibit No. 9 and 10 of this staff report. Any proposed modifications to the routes, times or fares, will require Executive Director review and approval to determine if an amendment to the permit is required.

4. Termination of Preferential Parking Program

(a) The parking program authorized by this permit shall terminate five years from the date of approval of the permit.

(b) The City may apply for a new permit to reinstate the parking program. Any such application shall be filed complete no later than 30 months from the date of approval of this permit and shall include all of the following information: The application for a new permit shall include a parking study documenting parking utilization of the street within the preferential zone, the two public beach lots located at 2030 and 2600 Barnard Way, and the public parking lots on Neilson Way (Lots No. 26, 11, 10, and 9). The parking study shall include at least three summer non-consecutive weekends between, but not including, Memorial Day and Labor Day. The parking study shall

also include a parking survey for the three summer non-consecutive weekends documenting purpose of trip, length of stay, parking location, destination, and frequency of visits.

(c) All posted parking restriction signs shall be removed prior to termination of authorization for preferential parking unless the Commission has approved a new permit to authorize preferential parking beyond five years from the date of approval of this permit.

5. Future Changes

Any change in the hours, days, or boundaries of the approved preferential residential parking zone will require an amendment to this permit.

6. Condition Compliance

Within 90 days of Commission action on this Coastal Development Permit application, or within such additional time as the Executive Director may grant for good cause, the applicant shall satisfy all requirements specified in the conditions hereto that the applicant is required to satisfy prior to issuance of this permit. Failure to comply with this requirement may result in the institution of enforcement action under the provisions of Chapter 9 of the Coastal Act.

7. Barnard Way Relocated Parking

Prior to the issuance of the Coastal Development Permit, the applicant shall submit evidence, subject to the review and approval by the Executive Director, demonstrating that the 13 short-term public parking spaces along the Barnard Way curve have been relocated and are available consistent with the terms of permit Amendment 5-84-591-A1.

IV. Findings and Declarations.

The Commission hereby finds and declares as follows:

A. Project Description, Location and Background

The City of Santa Monica proposes to establish a residential preferential parking zone with no parking or stopping at anytime without a permit, along the following described street within the City of Santa Monica:

Barnard Way, at the southern end of the street as it curves towards Neilson Way (in front of the multi-family senior citizen residence at 3356 Barnard Way).

The proposed project also includes the erection of signage within the preferential parking zone to identify the hours of the parking restrictions and demarcating the restricted areas.

The proposed zone is located in the South Beach area of the City. The zone is situated at the southern curve of Barnard Way (see Exhibit 1), just north of the City of Los Angeles' Venice Beach. The preferential parking area is separated from the main street by a concrete median that creates a short turn out from the main Barnard Way road. The area of the zone provides a total of approximately 13 -curb side parking spaces with parking on both sides of the street turn out.

Barnard Way is the first public road paralleling the coast and provides pedestrian and vehicle access to the South Beach Park and to the public park (tennis and basketball courts and landscape area) on the inland side of Barnard Way.

Residents that front on the southern side of Barnard Way (3356 Barnard Way) are allowed to park on the street with a permit 24-hours a day with no public parking. The preferential parking as proposed is to apply 24-hours a day, seven days a week. Residents within the parking zone would be allowed to purchase parking permits from the City. The City charges \$15.00 for an annual permit. The City's municipal code states that the number of Permits per residential household is limited to the number of vehicles registered at that address. If more than three permits are requested the applicant must show that sufficient off-street parking is not available to the applicant (Santa Monica Municipal Code Section 3233). Any vehicle parked without a permit will be removed by the City. The designated street will be posted with curbside signs indicating the parking restrictions.

The proposed preferential parking zone is adjacent to a 60-unit senior citizen residential complex at the southern end of the South Beach area. The residential structure was constructed in approximately 1982-83 and provides 31 on-site parking spaces.

The preferential parking zone (Zone P) was originally created by City ordinance (Santa Monica Municipal Code Section 3238p) in March 1989. The zone was established and implemented without the benefit of a Coastal Development Permit.

The City asserts that the loss of public on-street parking due to the preferential parking restrictions, is mitigated by replacement of approximately 147 on-street public street parking spaces within Zones A, B and P with 154 proposed and recently created day-time public parking spaces along Ocean Avenue, Bay Street, Pier Street, Main Street, Ocean Park Boulevard and within Parking Lot No. 9 on Neilson Way.

The 154 replacement spaces will be created through the removal of parking restrictions, street lane reconfiguration, and restriping. Of the 154 day-time parking spaces being proposed as mitigation, 65 spaces, or 42% of the City's total proposed replacement parking spaces, are spaces that currently exist. The City created these spaces between 1994 and 1999, after the establishment of the preferential zones. Since the 65 parking spaces were created after the

establishment of the parking districts and are not required parking for any prior permits, the City is requesting that the 65 existing spaces be included as replacement parking to mitigate the impact of the preferential parking restrictions.

B. Area History

Historically the area was a beach resort area related to the old Pacific Ocean Park Pier located in the southern part of the South Beach area. The area evolved into a lower-income residential area with neighborhood and beach commercial establishments. In 1977, the Commission approved a permit and subsequent amendments (#A318-76, amendments: A318-76A, A318-76A2, and #5-83-2A) for a phased development consisting of 397 condominium units, a 851-space parking garage, recreational amenities for the new residents, general landscaping on-site and within the South City Beach parking lots, and a public park located on the inland side of Barnard Way, across from the beach. The redevelopment project replaced a 9-hole golf course/open space area. The project was also conditioned to set aside the property at the southwest corner of Neilson and Barnard Way for senior citizen housing and the formulation of a Beach Access and Park Improvement Program to include landscaping of the beach parking lot west of the development site in addition to the public park that was to be developed on-site.

All development associated with the Commission approved permits has been constructed. The senior citizen housing project (3356 Barnard Way) that was to be located at the southwest corner of Neilson and Barnard Way was eventually constructed in 1982-83. The project provided 60 senior citizen units with 31 on-site parking spaces. This senior citizen project is located adjacent to the proposed preferential parking zone.

In 1984 the Commission approved coastal development permit #5-84-591(Santa Monica Redevelopment Agency. The permit was for the Ocean Park beach Improvement Plan that included improvements to the beach, beach parking lots, Ocean Avenue and Barnard Way. The project also included the provision of 21 preferential short-term metered public parking spaces along Barnard Way (8 spaces adjacent to the public park on the inland side of Barnard Way which were to replace parking that had been displaced and 13 spaces at the south curve of Barnard Way which the City proposed as additional public parking for residents and recreational visitors. The proposed preferential parking zone is located in the area where the 13 spaces were proposed in 1984 by the City and approved by the Commission. The City's current proposal to establish 24-hour preferential parking is inconsistent with the terms of coastal development permit #5-84-591 which describes the 13 parking spaces as short-term public parking spaces.

Therefore, the City has concurrently submitted a separate amendment request (5-84-591-A1) to re-allocate the 13 required short-term public spaces to an area outside of the proposed district. If the Commission approves the amendment request, the spaces along Barnard Way within the District will no longer be encumbered by the prior Commission action.

C. Previous Commission Permit Action on Preferential Parking Programs within the City of Santa Monica.

The Commission has approved one previous residential preferential parking zone permit application within the City of Santa Monica. In 1996 the City proposed 24-hour preferential residential parking along Adelaide Drive and Fourth Street, between Adelaide Drive and San Vicente Boulevard, in the north part of the City (CDP #5-96-059). The Commission found that due to the zone's distance from the beach and absence of direct access to the beach from the street the area did not provide significant beach access parking. However, because the public used the area for scenic viewing and other recreational activities the Commission found that the City's proposed 24-hour parking restriction was too restrictive and would significantly impact access and coastal recreation in the area. The Commission denied the permit and directed staff to work with the City to develop hours that the City could properly implement and would also protect public access and coastal recreation. The City subsequently submitted a new permit application with hours that restricted public parking only between the hours of 6:00 p.m. and 8:00 a.m. The Commission approved the permit with the proposed evening hour restrictions with special conditions (CDP #5-96-221). One of the special conditions limited the authorization to two years and required the City to submit a new permit application if the City wanted to continue the parking restrictions beyond that time, so that the program and possible impacts could be re-evaluated. The City is in the process of assembling the information to submit a new application for this parking zone.

D. State Wide Commission Permit Action on Preferential Parking Programs and Other Parking Prohibition Measures.

Over the last twenty years the Commission has acted on a number of permit applications throughout the State's coastal zone with regards to preferential parking programs along public streets (see Exhibit 9, for a chart of Preferential Parking Program Permit Applications). In 1979 the City of Santa Cruz submitted an application for a preferential parking program in the Live Oak residential area [P-79-295 (City of Santa Cruz)]. The program restricted public parking during the summer weekends between 11 a.m. to 5 p.m. The City proposed to mitigate the loss of available parking along the public streets by the availability of day use permits to the general public, the provision of remote lots and a free shuttle system. The Commission approved the program with the identified mitigation measures.

In 1982 the City of Hermosa Beach submitted an application for a preferential parking program for the area located immediately adjacent to the coastline and extending approximately 1,000 feet inland [#5-82-251 (City of Hermosa Beach)]. The proposed restricted area included the downtown commercial district and a residential district that extended up a hill 1,000 feet inland. The purpose of the preferential parking zone was to alleviate parking congestion near the beach. The program included two major features: a disincentive system to park near the beach and a free remote parking system to replace the on-street spaces that were to be restricted. The Commission found that the project as proposed reduced access to the coastal zone and

was not consistent with the access policies of the Coastal Act. Therefore, the Commission approved the preferential program with conditions to ensure consistency with the Coastal Act. The conditions included the availability of day-use parking permits to the general public and a shuttle system in addition to the provision of remote parking spaces. The Commission subsequently approved an amendment (July 1986) to remove the shuttle system since the City provided evidence that the shuttle was lightly used, the remote parking areas were within walking distance, and beach access would not be reduced by the elimination of the shuttle program. The City explained to staff that due to a loss of funds for the operation of the shuttle system it was necessary to discontinue the shuttle and request an amendment to the Coastal permit. The Commission approval of the City's amendment request to discontinue the shuttle system was based on findings that the shuttle system was not necessary to ensure maximum public access.

In 1983 the City of Santa Cruz submitted an application for the establishment of a residential parking permit program in the area known as the Beach Flats area [#3-83-209 (City of Santa Cruz)]. The Beach Flat area consists of a mix of residential and commercial/visitor serving uses, just north of the Santa Cruz beach and boardwalk. The area was originally developed with summer beach cottages on small lots and narrow streets. The Commission found that insufficient off-street parking was provided when the original development took place, based on current standards. Over the years the beach cottages were converted to permanent residential units. With insufficient off-street parking plus an increase in public beach visitation, parking problems were exacerbated. The Commission found in this particular case that the residents were competing with visitors for parking spaces; parking was available for visitors and beach goers in public lots; and adequate public parking in non-metered spaces was available. Therefore, the Commission approved the permit with conditions to ensure that parking permits (a total of 150) were not issued to residents of projects that were recently constructed and subject to coastal development permits.

In 1987 the Commission approved, with conditions, a permit for a preferential parking program in the City of Capitola [#3-87-42 (City of Capitola)]. The program contained two parts: the Village parking permit program and the Neighborhood parking permit program. The Village consisted of a mixture of residential, commercial and visitor-serving uses. The Neighborhood district consisted of residential development located in the hills above the Village area. The Village, which has frontage along the beach, is surrounded on three sides by three separate neighborhoods. Two neighborhoods are located above along the coastal bluffs with little or no direct beach access. The third neighborhood is located inland, north of the Village.

Similar to the Santa Cruz area mentioned above the proposed Village area changed from summer beach cottages to permanent residential units, with insufficient off-street parking. Insufficient off-street parking with an increase in beach visitation on-street parking was again a problem for residents and businesses within the Village and within the Neighborhood. The proposed preferential parking programs were proposed to minimize traffic and other conflicts associated with the use of residential streets by the visiting public. The Village program allowed residents to obtain permits to exempt them from the two-hour on-street parking limit

that was in place, and the requirement of paying the meter fee. The Neighborhood program would have restricted parking to residents only.

The Village program did not exclude the general public from parking anywhere within the Village. The Neighborhood program as proposed, however, would have excluded non-residents from parking in the Neighborhood streets. The Commission found that public access includes not only pedestrian access, but also the ability to drive into the Coastal Zone and park, to bicycle, and to view the shoreline. Therefore, as proposed the Commission found that the proposal would adversely affect public access opportunities. Without adequate provisions for public use of these public streets that include ocean vista points, residential permit parking programs present conflicts with Coastal Act access policies. Therefore, the Commission approved the permit with special conditions to assure public access. These conditions limited the number of permits within the Village area, restricted public parking limitations to vista point areas in the Neighborhood district, required an access signage program, operation of a public shuttle system, and monitoring program and imposed a one-year time limit on the development that was authorized (requiring a new permit or amendment to continue the program).

In 1990 the City of Los Angeles submitted an application for preferential parking along portions of Mabery Road, Ocean Way Entrada Drive, West Channel Road and East Rustic Road in the Pacific Palisades area, within Santa Monica Canyon [#5-90-989 (City of Los Angeles)]. The proposed streets were located inland of and adjacent to Pacific Coast Highway. The preferential parking zone extended a maximum of approximately 2,500 feet inland along East Rustic Road. According to the City's application, the purpose of the proposal was for parking relief from non-residents. Despite available parking along surrounding streets and in nearby State beach parking lots along Pacific Coast Highway that closed at 5:30 p.m., the Commission denied the application because the areas were used for parking by beach goers and because elimination of public on-street parking along these streets would significantly reduce public beach parking in the evening and also reduce visitor serving commercial parking.

In 1997 the Commission denied, on appeal, a City of Los Angeles' Coastal Development Permit for preferential residential parking in the Venice area [A-5-VEN-97-183 (City of Los Angeles)]. The Commission found that because of the popularity of Venice Beach and Ocean Front Walk (boardwalk), the limited amount of off-street beach parking within the beach parking lots was not adequate to support the amount of visitors that came to the area and that the surrounding neighborhoods served as a parking alternative to the beach parking lots. Therefore, the Commission found that restricting public parking along these streets during the beach use period would adversely impact beach access.

As shown above, the Commission has had before them a number of preferential parking programs statewide. The Commission has approved all of the programs except for two programs. While the approved programs regulated public parking they did not exclude public parking in favor of exclusive residential use. Because the programs were designed or conditioned by the Commission to preserve public parking and access to the beach, the Commission found the programs consistent with the access policies of the Coastal Act.

All programs attempted to resolve a conflict between residents and coastal visitors over on-street parking. The Commission approved the programs only when the Commission could find a balance between the parking needs of the residents and the general public without adversely impacting public access. For example, in permit #P-79-295 (City of Santa Cruz) and #5-82-251 (City of Hermosa Beach) preferential parking was approved with mitigation offered by the City or as conditions of approval that were required by the Commission to make available day use permits to the general public, remote parking and a shuttle system. In #3-83-209 (City of Santa Cruz), because of a lack of on-site parking for the residents within a heavily used visitor serving area, and adequate nearby public parking, the Commission approved the project to balance the needs of the residents with the general public without adversely impacting public access to the area. In #3-87-42 (City of Capitola) the Commission approved the program for the visitor serving area (the Village) because it did not exclude the general public from parking in the Village but only limited the amount of time a vehicle could park. However, preferential parking in the Neighborhood district, located in the upland area, was, for the most part, not approved since it excluded the general public from parking. The only areas within the Neighborhood district that were approved with parking restrictions were those areas immediately adjacent to vista points. In these areas the Commission allowed the City to limit public parking to two-hour time limits.

Where a balance between residents and the general public could not be found that would not adversely impact public access opportunities the Commission has denied the preferential parking programs, as in the case of #5-90-989 and A5-VEN-97-183 (City of Los Angeles).

In addition to preferential parking programs, the Commission has also reviewed proposals to prohibit general parking by such measures as posting "No parking" signs and "red curbing" public streets. In 1993 the City of Malibu submitted an application for prohibiting parking along the inland side of a 1.9 mile stretch of Pacific Coast Highway [#4-93-135 (City of Malibu)]. The project would have eliminated 300 to 350 parking spaces. The City's reason for the request was to minimize the number of beach goers crossing Pacific Coast Highway for public safety concerns. The Commission denied the request because the City failed to show that public safety was a problem and because no alternative parking sites were provided to mitigate the loss of available public parking. Although there were public parking lots located seaward of Pacific Coast Highway and in the upland areas, the City's proposal would have resulted in a significant loss of public parking. The Commission, therefore, found that the proposal would adversely impact public access and was inconsistent with the access policies of the Coastal Act. In denying the proposal, the Commission recognized the City's desire to maximize public safety and found that there were alternatives to the project, which would have increased public safety without decreasing public access.

In 1989 the Commission appealed the City of San Diego's permit for the institution of parking restrictions (red curbing and signage) along residential roads in the La Jolla Farms area (#A-6-LJS-89-166). The impetus for the parking restrictions was residential opposition to the number of students from the University of California at San Diego campus who parked on La Jolla Farms Road and Black Gold road, and the resulting traffic and public safety concerns

associated with pedestrians and road congestion in the area. Specifically, the property owners association cited dangerous curves along some portions of the roadway, which inhibited visibility; lack of sidewalks in the area and narrow streets (between 37 to 38 feet wide); and increased crime.

The Commission filed the appeal due to concerns on the parking prohibition and its inconsistency with the public access policies of the Coastal Act. The area contained a number of coastal access routes for beach access and access to a major vista point.

The Commission found that the City's permit would eliminate a source of public parking and would be inconsistent with the public access policies of the Coastal Act. The Commission further found that the elimination of the public parking spaces along the areas proposed could only be accepted with the assurance that a viable reservoir of public parking remained within the area. Therefore, the Commission approved the project with special conditions to limit public parking to two-hours during the weekdays and unrestricted parking on weekends and holidays. The Commission further allowed red-curbings basically along one side of the road(s) and all cul-de-sacs for emergency vehicle access. The Commission found, in approving the project as conditioned, the project maximized public access opportunities while taking into consideration the concerns of private property owners.

As in the preferential parking programs that have come before the Commission in the past, if proposed parking prohibition measures can be proposed or conditioned so that private property owner concerns can be balanced with coastal access opportunities, where impacts to public access is minimized, the Commission may find such proposals consistent with the public access policies of the Coastal Act.

E. Development Which Requires a Coastal Development Permit

Section 30600 of the Coastal Act requires a local government wishing to undertake development in the coastal zone to obtain a coastal development permit.

Pursuant to Section 30106 of the Coastal Act development includes a change in the intensity of use of land; a change in the intensity of use of water, or of access thereto; and placement of solid material or structure. In this instance the change in intensity of use of land is converting the on-street parking spaces from public spaces to private residential spaces, i.e. a change in use from a public use, to a private residential use, which in this instance is located on public property. A change in intensity of use of access to the water will also result from the creation of a preferential parking district (zone) by prohibiting public parking and completely limiting the amount of time one can park on a public street adjacent to the beach. Placement of the parking signs implementing the district also constitutes development.

The Commission has consistently maintained that the establishment of preferential parking programs constitutes development and could adversely impact public access to public beaches and other coastal recreational areas.

The City states that in 1983 Commission legal staff confirmed that permits were not required for the establishment of preferential parking zones. The City has included a City interoffice memo (dated September 3, 1983) stating that they spoke to Commission legal staff regarding preferential parking and that legal staff at the Commission told them that a permit would not be required (see Exhibit 4). The City has not provided Commission staff with any evidence of written correspondence between Commission staff and City Staff addressing this issue and Commission staff has not found any record of such correspondence with the City. Instead, staff has located two legal staff letters written in 1983 which clearly state that a coastal development permit is required in order to establish a preferential parking program. In 1983 the Commission's staff counsel sent a letter to Santa Barbara's Office of the City Attorney (12/19/83) in response to the City's inquiry regarding whether or not a coastal development permit would be required for the establishment of a preferential parking program within the coastal zone of the City of Santa Barbara. The letter from Staff Counsel states, in part, that the establishment of preferential parking zones and the erection of signs is considered development and that the Commission has jurisdiction over the establishment of such zones/districts (see Exhibit 5). Again in 1983, another Commission staff counsel sent a letter to the City of Santa Cruz (9/29/83) concluding that a coastal development permit must be issued to authorize the proposed Beach Flats Residential Parking Program (see Exhibit 6). Finally, as stated above, the Commission has acted on numerous preferential parking programs over the last 20 years and has consistently asserted jurisdiction over the establishment of preferential parking zones/districts.

The City also states that the City has exclusive authority to create preferential parking zones. The Commission does not disagree with this point. Although the Vehicle Codes provide the City with the ability to create preferential parking zones, this authority is permissive and in no way eliminates the requirements of other applicable state laws such as the Coastal Act.

The City of Santa Monica further states that preferential parking zones in Santa Monica do not restrict coastal access. The Commission does not agree and has consistently maintained that such zones/districts have potential adverse impacts to coastal access and recreation. The impacts of each zone may vary depending on location, hours, boundaries and coastal and recreational facilities in the area. Therefore, each preferential parking zone needs to be analyzed on a case by case basis to determine the zone's impact to beach access and its consistency with the Coastal Act. The proposed preferential parking zone's impact to coastal and recreational access is addressed below.

F. Public Access and Recreation

One of the strongest goals of the Coastal Act is to protect, provide and enhance public access to and along the coast. The establishment of a residential parking zone within walking distance of a public beach or other recreational areas will significantly reduce public access opportunities.

Several Coastal Act policies require the Commission to protect beach and recreation access:

Section 30210 of the Coastal Act states:

In carrying out the requirement of Section 4 of Article X of the California Constitution, maximum access, which shall be conspicuously posted, and recreational opportunities shall be provided for all the people consistent with public safety needs and the need to protect public rights, rights of private property owners, and natural resource areas from overuse.

Section 30211 of the Coastal Act states:

Development shall not interfere with the public's right of access to the sea where acquired through use or legislative authorization, including, but not limited to, the use of dry sand and rocky coastal beaches to the first line of terrestrial vegetation.

Section 30212.5 of the Coastal Act states:

Wherever appropriate and feasible, public facilities, including parking areas or facilities, shall be distributed throughout an area so as to mitigate against the impacts, social and otherwise, or overcrowding or overuse by the public of any single area.

Section 30213 of the Coastal Act states in part:

Lower cost visitor and recreational facilities shall be protected, encouraged, and, where feasible, provided. Developments providing public recreational opportunities are preferred.

Section 30214 of the Coastal Act states:

(a) The public access policies of this article shall be implemented in a manner that takes into account the need to regulate the time, place, and manner of public access depending on the facts and circumstances in each case including, but not limited to, the following:

(I) Topographic and geologic site characteristics.

(2) The capacity of the site to sustain use and at what level of intensity.

(3) The appropriateness of limiting public access to the right to pass and repass depending on such factors as the fragility of the natural resources in the area and the proximity of the access area to adjacent residential uses.

(4) The need to provide for the management of access areas so as to protect the privacy of adjacent property owners and to protect the aesthetic values of the area by providing for the collection of litter.

(b) It is the intent of the Legislature that the public access policies of this article be carried out in a reasonable manner that considers the equities and that balances the rights of the individual property owner with the public's constitutional right of access pursuant to Section 4 of Article X of the California Constitution. Nothing in this section or any amendment thereto shall be construed as a limitation on the rights guaranteed to the public under Section 4 of Article X of the California Constitution.

(c) In carrying out the public access policies of this article, the commission, regional commissions, and any other responsible public agency shall consider and encourage the utilization of innovative access management techniques, including, but not limited to, agreements with private organizations which would minimize management costs and encourage the use of volunteer programs.

Section 30223 of the Coastal Act states:

Upland areas necessary to support coastal recreational uses shall be reserved for such uses, where feasible.

Section 30252(4):

The location and amount of new development should maintain and enhance public access to the coast by ...providing adequate parking facilities or providing substitute means of serving the development...

In preliminary studies that led to the adoption of the Coastal Act, the Commission and the Legislature reviewed evidence that land uses directly adjacent to the beach were required to be regulated to protect access and recreation opportunities. These sections of the Coastal Act provide that the priority of new development near beach areas shall be given to uses that provide support for beach recreation. The Commission has evaluated these concerns in upland and mountainous areas near the beach to provide coastal viewing and alternatives to the beach

for jogging, strolling and cycling. Furthermore, the Commission has consistently addressed both public and private parking issues in order to protect the ability of beach visitors who depend on the automobile to access the beach.

The City's LUP states that the Santa Monica State Beach is the most heavily used beach in Los Angeles County and possibly in the State. The City has estimated that over 20 million people visit Santa Monica's beaches annually (City of Santa Monica's 1992 certified Land Use Plan). In 1998, between July and September approximately 7.5 million people came to Santa Monica beaches (County of Los Angeles Fire Department Lifeguard Division).

The beach area between the Pier and Pico Boulevard is a broad sandy beach and according to the City's LUP is the most active recreation-oriented area of the Santa Monica beaches. The area provides volleyball courts, outdoor gymnastic facilities, swings, a children's play area, Pedestrian promenade, and bike path. The Commission recently approved a permit [CDP #5-98-009 (City of Santa Monica)] for the renovation and improvement of this beach area including the recreational facilities and Promenade. The beach area south of Pico Boulevard is the South Beach area. The South Beach is improved with a landscaped beach park, picnic facilities, children's playground, food concessions, restrooms, pedestrian promenade and bike path [CDP #5-84-591 (Santa Monica Redevelopment Agency)]. With development of hotels, restaurants, and improvements to the Pier and beach, Santa Monica beach area has been attracting an increasing amount of visitors from throughout the Los Angeles area and from outside of the region.

The proposed preferential parking zone is located within the first block from the beach, between the beach and Neilson Way. Because of the zone's close proximity to the beach the area is heavily used by beach goers and recreationalists.

In the City's submittal letter, the City argues that there is adequate public parking for beach access, therefore, the preferential parking zones will not adversely impact public beach access. Commission staff does not agree. The Coastal Act requires that maximum access shall be provided for and public facilities, including parking areas or facilities, be distributed throughout an area, and that lower cost visitor and recreational facilities shall be protected. Public curbside parking is a valuable source of beach and recreational access for short-term and long-term users. Restricting the hours or eliminating public parking within a beach area that is heavily used by the public for beach and recreational access is inconsistent with the access policies of the Coastal Act.

The City provides approximately 5,434 parking spaces within public beach lots and on the Pier. Of this total approximately 2,486 spaces are located north of the Pier within 10 public beach lots that are spread out along Palisades Beach Road (Pacific Coast Highway) between the Pier and the City's northern boundary line. The Pier lot provides 286 spaces on the Pier's deck.

From the Pier to the City's southern boundary line, the City provides approximately 2,948 spaces within 5 public beach lots (see Exhibit 7). The largest lots are the two lots (2030

Barnard Way and 2600 Barnard Way) located south of Pico Boulevard (South Beach area). These two beach lots provide 2,406 spaces or approximately 81% of the total beachfront parking supply south of the pier.

The beach parking lots are owned by the State Department of Parks and Recreation. The lots are maintained by the City and the City contracts out the parking operation to a private parking management firm. The parking fee for the beach lots is a flat fee of approximately \$6.00 during the winter and \$7.00 during the summer.

In addition to the public beach lots, the City also provides approximately 151 5-hour and 7 2-hour metered spaces along the first public road paralleling the sea (Ocean Avenue and Barnard Way) and on a few side streets that run perpendicular to the beach and terminate at the beach Promenade. Approximately 91% (144) of the total metered spaces are located south of Pico Boulevard. The meter fee is \$0.50 per hour.

One block inland, along Neilson Way, the City provides approximately 361 off-street metered parking spaces within four public lots (see Exhibit 8). Meter time limits are predominantly 3-hours in duration with some extending to 10 hours. These lots serve the Main Street visitor-serving commercial district. However, due to their close proximity to the beach and their hourly rate (\$0.50 per hour), as compared to the beach lots' flat fee (\$7.00 during the summer), the lots are also used by beach goers and recreationalists.

The proposed preferential parking zone is located adjacent to the beach area along the first public road paralleling the sea. As stated above there are 5 public beach lots located between the Pier and the southern City limit that serve the entire beach area south of the Pier. In 1997 the City had traffic/parking studies prepared for the Pier/ beach area (Pier/Beach Circulation and Access Study, April 29, 1997). The parking study that was prepared for the beach lots included a parking count for Sunday of Labor Day weekend (1996). Sundays are typically Santa Monica's most heavily used day and Labor Day weekend is the most heavily used weekend for the year. The survey found that:

Nearly all lots were over 90 percent occupied (considered to be effectively fully occupied) at 2:30 PM on Sunday, except for 2030 Barnard way, which still was not fully occupied (only 68 percent utilized by 2:30 PM). By 4:00 PM the pier lot and 1550 PCH were still fully occupied, while the 2030 Barnard Way lot occupancy remained at 67 percent (also note that at 1:00 PM when the 1550 PCH lot is 83 percent occupied, the Barnard Way lot is 47 percent occupied). This clearly indicates that the lots closest to the Pier become occupied first, with the south beach lots becoming more fully occupied only following the northern lots closer to the Pier.

The City also provided weekend parking counts by the lot operator from 1996 to 1998. The parking counts were based on total cars parked during the entire operating day and not broken down to hourly counts. For the area south of the Pier, where the preferential

parking zone is located, the figures show that the parking lots between the Pier and Pico Boulevard are heavily impacted during the summer weekends. The demand varies from a low of 17% to a high of 100% during the summer weekends (parking lots are effectively at capacity once they reach 90%). The two main lots south of Pico Boulevard (2030 Barnard Way and 2600 Barnard Way lots) do not reach capacity and are generally underutilized. The total daily utilization for these two lots for the summer weekend is approximately 39-67%.

Visitors to Santa Monica Beach come from all over the Los Angeles area, the state and country. The amount of time visitors stay at the beach varies depending on the type of activity. Some beach visitors come to jog or exercise at the beach and their stay may last an hour or less. Other visitors may stay a couple of hours to all day. Therefore, the provision of an adequate supply of both short-term and long-term parking is important to meet the needs of the various types of beach users. Section 30212.5 of the Coastal Act requires that parking areas shall be distributed throughout an area to mitigate against the impacts, social and otherwise, or overcrowding of overuse by the public of any single area. The availability of on-street parking provides the public needed short-term parking in order to access the beach and recreational facilities and provides low-cost visitor serving facilities consistent with Section 30213. Furthermore, Section 30210 requires that maximum access be provided.

The City's supply of (metered) on-street parking that is currently available to the public along Ocean Avenue and Barnard Way is heavily used by the public and on summer weekends the spaces are fully occupied (based on staff observations). The public short-term metered lots along Neilson Way are also heavily used and reach capacity during the summer months. By creating the preferential parking zone that prohibits public parking 24-hours a day, seven days a week, the City has effectively removed from public use all curb side parking along this portion of Barnard Way during the beaches' peak use period inconsistent with prior commission permit actions. Restricting the public's ability to park within this area will limit curb side parking along Barnard Way to only 7 (plus 1 Handicap) spaces, significantly reducing the amount of short-term parking within this area. The proposed preferential residential parking restrictions that prohibit any public parking will eliminate all other access to public property.

Although the two main south beach parking lots are underutilized even during the summer peak beach use period the flat fee charged (\$7.00) in the beach lots does not encourage short-term use and is cost prohibitive for some beach visitors. For beach visitors that plan on staying for a short period and for those beach goers that frequently visit the beach area the beach lots are avoided due to the relatively high cost of the lots. These types of visitors seek out low-cost parking alternatives, such as free curbside parking and metered parking spaces. Preferential residential parking zones with hours that restrict the public from parking during the peak beach use periods eliminates an alternative source of parking to the beach lots.

From Ocean Park Boulevard to the City's south City limit there are currently approximately 14 short-term parking spaces (7 metered spaces, plus 1 handicapped, along Barnard Way and 6 unrestricted spaces along the south side of Ocean Park Boulevard) between Neilson Way and

the beach. As a condition of permit amendment #5-83-2-A (Appeal No. 318-76 Santa Monica Redevelopment Agency) the Commission required that the City provide additional short-term public parking on the north and south side of Ocean Park Boulevard, between Ocean Avenue and Neilson Way. The Commission found that:

The short-term parking provides support for the local residents for needed residential parking, and would also be necessary to support the proposed onsite park use and adjacent beach recreational areas located along Barnard Way...The conditions require the applicant to construct additional parking spaces along Barnard Way and Ocean Park Boulevard to provide short-term parking support within the residential community, for the recreational amenities located outside of the State Beach and for short-term coastal recreational visitors.

As stated above, the area of the proposed preferential parking zone along the Barnard Way curve was originally created to provide 13- curb side short-term parking spaces for use by residents and their visitors and to help support the need for short-term public parking to support public use of the beach park and park area inland of Barnard Way. In 1983 the City (Santa Monica Redevelopment Agency) applied for a coastal development permit for the improvements to the South Beach and to the adjacent first road paralleling the sea, Ocean Avenue/ Barnard Way [CDP #5-84-591(Santa Monica Redevelopment Agency). The beach improvements included a 1.5 acre landscaped park, renovation of the beach parking lot, new entrances and exits, and concession stands. The road improvements, as proposed by the City, included changing the four-lane road to two lanes (one in each direction) and the provision of 21 short-term metered parking spaces along Barnard Way. Eight of the spaces were to replace short-term spaces that would be removed from the seaward side along Barnard Way due to beach and road improvements. The remaining 13 spaces were proposed by the City as necessary spaces to support the short-term parking needs of the residential development in the area and to provide short-term parking for visitors as support parking for the park and other recreational facilities.

In the City's staff report, the City found that the 21 spaces were necessary to support the short-term demand of the residents within the adjacent senior citizen housing as well as the demand of the short-term visitor. Furthermore, in approving the development the Commission found that the short-term parking provides support for the local residents for needed residential parking, would also be necessary to support the proposed on-site park use and adjacent beach recreational areas located along Barnard Way and would mitigate the impacts of overcrowding and overuse by the public of a single area.

Because of the proximity of these on-street parking spaces to the beach and coastal recreational facilities, restricting the ability of the public to park within these spaces during the day will adversely impact beach access. Over the last twenty years the Commission has found in past coastal permit action throughout the State, regarding preferential parking programs and other parking prohibition measures, the needs of the residents and the general public must be balanced without adversely impacting public access [#P-79-295 (City of Santa

Cruz); #5-82-251 (City of Hermosa Beach); #3-83-209 (City of Santa Cruz); #3-87-42 (City of Capitola; #5-90-989 (City of Los Angeles); #4-93-135 (City of Malibu); #A-6-LJS-89-166 (City of San Diego); and #5-97-215 (City of Santa Monica)].

In past Commission permit action in approving preferential parking programs throughout the State's coastal zone, the Commission found such programs consistent with the Coastal Act only if the loss of public parking was adequately mitigated. Such mitigation included combinations of either providing replacement parking to maintain the current supply of parking; shuttle programs to serve the beach area; issuance of parking permits that would be available to the general public so that the public has the same opportunity to park on the public streets as the residents; and/or time limits that would continue to allow the public an ability to park on the streets during the beach use period. Where the impact could not mitigate the loss of public parking and the needs of the public could not be balanced with the needs of the residents the Commission denied the permit applications.

The City argues that the impact to beach access from the preferential parking zones A, B, and P, is during the daytime. To mitigate the loss of public parking within the zone the City is proposing to replace the loss of the 147 available public on-street parking spaces by providing 154 additional day-time public parking spaces along nearby streets and within existing public parking lots. The spaces will be created through removal of parking restrictions, street lane reconfiguration, and restriping. Of the 154 daytime public parking spaces 65 spaces are spaces that the City has created between 1994 and 1999.

The City states that since the creation of the preferential parking zones they have partially mitigated the loss of day-time street parking within the preferential zones by providing 65 additional public day-time parking spaces throughout the surrounding area. The City will provide an additional 89 new daytime public parking spaces to fully mitigate the impact on public parking.

Prior to the creation of the preferential zones the streets were shared by residents, hotel employees, employees of the Main Street commercial area, and beachgoers. The City argues that because of this sharing only a percentage of the parking was ever available to the general public. The City has reviewed the original parking studies associated with the existing preferential parking zones and other similar zones outside of the Coastal Zone and based on these studies has determined that residential parking occupied between 30-60 percent of on-street spaces during the weekdays and 75-100 percent during the weekend. Therefore, 40-70 percent of the on-street parking was available to the public during the weekday and only 0-25 percent was available during the weekend. Since only a percentage of the parking was available to the general public because of residential occupancy, the City argues that only a percentage of the total on-street parking needs to be mitigated.

Staff disagrees with the City's argument. Prior to any restrictions the parking spaces were available to all—residents and the general public. As such, the parking was available on a

first come first serve basis and everyone had an equal opportunity to park in any one of the spaces. Therefore, the general public could park in 100% of the parking spaces. Moreover, if on the weekend, which is generally the peak beach use period, only a small percentage of the on-street parking is available to the public, parking conflicts between residents and visitors would not be significant and there would not be a need for any parking restrictions.

However, although the City argues that the actual impact of the preferential parking should be considered based on the percentage of parking that would be available due to occupancy of the residents, the City is proposing to replace 100% of the parking spaces impacted by the parking restrictions, with a mix of short and long term public spaces.

As stated, since 1994, the City has provided 65 on-street parking spaces, or 43% of the existing 147 total on-street parking spaces impacted within zones A, B, and P. These spaces include 29 metered spaces with 1-hour limits and 36 unrestricted non-metered on-street spaces. The City is proposing to create an additional 89 new public parking spaces, or 60% of the 147 total on-street parking spaces impacted within the three zones (the City is actually providing 154 spaces or 104% replacement). The proposed 89 additional spaces will be a mix of 1-hour and 3-5 hour spaces.

The City states that the impact of the preferential parking is further mitigated by the City's mass transportation services. The City has two bus services that operate along Main Street plus a summer beach shuttle. The Santa Monica Municipal Bus line (The Big Blue Bus) operates routes throughout the City and surrounding area and includes two separate routes along Main Street, and along Fourth Street and the southern portion of Neilson Way. This mass transportation service provides local and regional transportation from as far inland as downtown Los Angeles. Transportation fare is \$.50, and \$1.25 for the express line to and from Downtown Los Angeles.

The second bus service is the local Tide shuttle. The shuttle service was established by the City in 1993. The shuttle operates between the Main Street area and the third Street Promenade in a one-way loop extending along Main Street from Marine Street, north to Bicknell street, east to 4th Street to Broadway in Downtown Santa Monica. It returns to the Main Street area via Ocean Avenue and Barnard Way. Transportation fare is \$0.25.

The City also provides a summer Pier/Beach Shuttle. This beach shuttle was established by the City in 1997. The shuttle is free and runs every ten minutes on summer weekends between the Santa Monica Pier and Santa Monica's South Beach lots. Riders receive \$2.00 off the parking fee at the beach lot. According to the City the purpose of this shuttle is to provide a better parking distribution among coastal visitors.

The City's transit service provides an attractive alternative to driving and parking at the beach and traveling from one coastal visitor destination to another. No other Southern California beach city provides the type of mass transit that the City of Santa Monica provides.

In addition to the parking and mass transit service the City argues that they have committed significant resources towards improvements that will make access easier and safer. New improvements include additional signals, and crosswalks, reconstruction of intersections, and the addition of median islands. The City states that they have invested over 25.9 million dollars in beach improvements over the last 14 years in order to accentuate the beach experience for coastal visitors. These improvements include creation of a beach bike path, improved park and play areas, and restoration of the Santa Monica Pier. The City has also implemented a signage program to improve visitor access to the coast. The City is also developing a marketing program to better inform regular visitors and new visitors of the various beach parking options available along the coast.

The City feels that with the combination of proposed short-term and long-term spaces along the street, and within the South Beach lots, and the current supply of long term spaces within the beach lots, there is adequate parking available to meet the current beach demand. The City states that within the Coastal Zone there are over 10,000 public parking spaces including approximately 5,434 parking spaces within public beach lots and on the Pier; 550 metered street spaces; 330 metered lot spaces.

Of the total parking within the beach lots the peak utilization rate during the summer was 58% or a total surplus of 3,151 spaces. Within the two main South Beach lots, that provide 2,406 spaces, the occupancy rate during the summer is approximately 67%. Therefore, the South Beach lots have a surplus of at least 793 parking spaces during the summer, including during summer holiday periods.

In addition to the City's beach lots relatively low occupancy rate the City provides significantly more parking than other beach Cities. Surrounding beaches, such as the Venice and Pacific Palisades area, provide less public beach lot parking than the City of Santa Monica. Venice Beach provides 954 public parking spaces within three public beach lots, or 17% of the total beach lot spaces provided by the City of Santa Monica. Will Rogers Beach, in the Pacific Palisades area, provides a total of 1,813 public spaces within five public beach lots, or 33% of the spaces provided by the City of Santa Monica. Furthermore, the Venice and Will Rogers beach lots operate near or at full capacity during the summer weekends, and do not have the surplus parking as the City of Santa Monica.

Moreover, the City beach parking rates are the lowest among the surrounding beaches (Venice and Pacific Palisades). During summer weekends the flat rate is \$7.00 for all-day a flat rate. Venice and Will Rogers beaches charge \$9.50. The City of Santa Monica is also considering lowering the current parking fee for the South Beach lots by \$1.00 to increase utilization in those lots.

The City is also planning to provide additional short-term spaces within one of the South Beach lots to minimize the conflict occurring on the street between general and residential use. The City is proposing to convert 68 parking spaces within the underutilized south

beach parking lot to short-term (90 minutes) spaces. By converting some of the long-term, flat fee, spaces too short-term the City hopes to encourage and increase the utilization of the south lots.

As shown above, the City will provide replacement parking, will continue to provide mass transit that services the beach area and visitor-serving areas, and has beach parking lots that provide surplus parking during the summer months. However, Section 30210 of the Coastal Act requires that maximum access be provided. The replacement parking being proposed for mitigation does not fully replace the impacted spaces due to the time limits proposed on the replacement spaces. According to the City, 39 of the spaces will have 1-hour time limits.

The 147 spaces within Zones A, B, and P are located within the first block of the beach with an unlimited time limit. The replacement of these spaces with 1-hour maximum metered spaces will not provide public parking for beach access due to their short time limit. Beachgoers that park on the street rather than the beach lots are looking for free or inexpensive parking. Their length of stay could vary from less than an hour to over 4 hours. One hour does not provide adequate time for a beachgoer to park and access and enjoy the beach area.

As part of the City of Santa Monica's 1999 access study of the beach impact area a parking utilization and duration surveys were conducted on a summer weekday (August 26, 1998) and summer weekend (August 30, 1998), when peak beach use occurs. The report indicates that based on a survey of over 4,500 vehicles users of the southern parking lots stayed an average of 2.4 hours. The majority of vehicles, or 64%, were short-term, staying two hours or less. Within the Main Street public lots the average stay is similar to the beach lots at 2.05 hours.

As indicated in the two surveys the average stay is approximately 2 hours. If the majority of the replacement parking was approved with a 1-hour public parking limitation, this time limit would preclude access for a large segment of the beach going public, based on the City's surveys. The time limits and location of most of the spaces will only serve visitors to the commercial establishments in the Main Street area.

Thus, the provision of a minimum of a 2-hour public parking requirement, between the hours of 9:00 a.m. and 8:00 p.m., is necessary to provide adequate time for the public parking in the area to walk, skate or bike the two to four blocks to the beach and have adequate time to enjoy the beach during the summer daytime hours. Therefore, in order to provide adequate replacement parking that could potentially be used by beachgoers the minimum time limit should be 2-hours with a mix of longer-term parking (3-5 hours). The City currently provides 5-hour metered spaces along Ocean Avenue. The proposed replacement spaces in this area and proposed along Ocean Park Boulevard, west of Neilson Way, should be consistent with this time limit. The replacement spaces along Main

Street should be at least 2-hours. Requiring longer durations will encourage employee parking and will effectively remove them from general use.

Public beach access and public use of these proposed spaces is enhanced by the City's shuttle service that services the Main Street area, beach and Pier. Therefore, in addition to requiring replacement parking the City shall continue to operate the Tide Shuttle and Beach Shuttle services during the summer months to mitigate the loss of 148 parking spaces.

The Commission finds that based on the current supply and demand within the beach lots and on the surrounding streets, the City's mass transit service, and mix of short-term and long-term spaces providing parking between the hours of 9:00 a.m. and 8:00 p.m., the proposed 24-hour restriction balances the needs of the residents with those of the general public. To ensure that the needs of the general public are addressed and to eliminate the adverse impact to beach access a special condition is necessary to provide a mix of short-term and long-term metered spaces with a 2-hour minimum between the hours of 9:00 a.m. and 8:00 p.m., and continue to provide the two shuttle services during the summer months. As conditioned, the permit will continue to allow the residents to park on the public streets but will also provide additional parking opportunities to the public and ensure that the shuttle services are available to encourage use of the remote spaces. Furthermore, as conditioned the hours will protect the peak beach use periods normally associated with beach access and coastal recreation and will not significantly impact beach access and recreation consistent with the Commission's previous permit actions for this area.

Furthermore, it has been estimated that approximately 7.5 million visitors came to Santa Monica beaches in 1998 during the summer, between July and September (County of Los Angeles Fire Department, Lifeguard Division). Beach attendance has increased by approximately 20% since 1972. With each subsequent year, as Southern California's population increases, the amount of visitors to the beach will increase and there will be an increase in the demand for short-term and long-term beach parking within the beach lots and surrounding area. Therefore, to ensure that the restrictions will not adversely impact beach access in the future, the authorization for the parking restrictions will terminate in five years. The City may apply for a new permit to reinstate the parking program. The City may also develop alternative parking for the public in the future that the Commission may consider as appropriate replacement parking to mitigate the loss of public on-street spaces. If the City decides to continue the parking restrictions, prior to the expiration of the authorization of the parking restrictions, the City shall submit a new permit application which shall include a parking study that evaluates parking utilization for the streets within the proposed preferential parking zone and the nearby beach parking during the summer weekends. To gather information that would be representative of the summer period the survey weekends shall be spread-out over the summer period and not consecutive weekends. The study shall include a parking survey for the streets within the zone and within the surrounding area to determine purpose of trip, length of stay, parking location, destination, and frequency of visits.

All posted parking restriction signs shall be removed prior to termination of the preferential parking authorized by this permit, unless the Commission has approved a new permit to authorize preferential parking beyond five years from the date of approval of this permit. Furthermore, to ensure that any change in the restrictions or size of the zone will not adversely impact coastal access, any proposed change in the hours, days, or boundaries of the proposed preferential residential parking zone will require an amendment to this permit. Prior to the issuance of the permit the City shall submit evidence that the 13 short-term public parking spaces along the Barnard Way curve have been relocated and in operation consistent with the terms of permit amendment 5-84-591-A1.

The City objects to a time limit on the development that is authorized by this permit. The City is concerned with residents' uncertainty as to whether their ability to park in their neighborhoods will continue into the future. A time restriction also poses difficulty for the City as it limits the City's ability to do any long-range planning in the area due to uncertainty regarding resident parking. A third concern is the level of analysis that would be required each time a permit is applied for and the cost. The City estimates that the cost would be approximately \$150,000 each time a permit is applied for.

In lieu of a time limit on the development authorized by this permit, the City is proposing a monitoring program. The City is proposing to conduct a parking monitoring program which will include filing a report with the Executive Director within a five year period after approval of the permit. The report will include a parking study of the two south beach parking lots during two summer months. If the Executive Director determines that there are changed circumstances that may affect the consistency of the parking program with the policies of Coastal Act, the City would then apply for an amendment to the permit.

Although the Commission understands the City's concerns, the City's proposed monitoring program would place Commission staff in a position where they would need to make a policy decision that is in the Commission's purview. The determination as to whether there is a significant change in the parking situation and the impacts to public access is a policy matter for the Commission. Furthermore, there could be a difference of opinion between Commission staff and City staff in terms of the conclusions of the report. Because the protection, provision and enhancement of public access to and along the coast is one of the strongest goals of the Coastal Act, the re-review of the information and the impact of the preferential parking districts should be by the Commission through the permit process. Therefore, the Commission finds it necessary to limit the time the parking program is authorized for to five years. The Commission, therefore, finds that, only as conditioned, will the proposed project be consistent with Sections 30210, 30211, 30212.5, 30213, 30214, 30223, and 30252(4) of the Coastal Act of 1976.

G. Unpermitted Development

In 1989 the City approved an ordinance creating the residential preferential parking zone. According to the City the restrictions for the zone became effective and enforced by the City

the same year. There are no records of permits issued for this development. Although unpermitted development has taken place on the property prior to submission of this permit application, consideration of the application by the Commission has been based solely upon the Chapter 3 policies of the Coastal Act. Action by the Commission on the permit does not constitute a waiver of any legal action with regard to the alleged violation nor does it constitute an admission as to the legality of any development undertaken on the subject site without a Coastal permit.

H. Local Coastal Program

Section 30604(a) of the Coastal Act states that:

Prior to certification of the Local Coastal Program, a Coastal Development Permit shall be issued if the issuing agency, or the Commission on appeal, finds that the proposed development is in conformity with the provisions of Chapter 3 (commencing with Section 30200) of this division and that the permitted development will not prejudice the ability of the local government to prepare a Local Coastal Program that is in conformity with the provisions of Chapter 3 (commencing with Section 30200).

In August 1992, the Commission certified, with suggested modifications, the land use plan portion of the City of Santa Monica's Local Coastal Program, excluding the area west of Ocean Avenue and Neilson Way (Beach Overlay District), and the Santa Monica Pier. On September 15, 1992, the City of Santa Monica accepted the LUP with suggested modifications.

The area within the Beach Overlay District was excluded from certification after the voters approved Proposition S which discourages certain types of visitor-serving uses along the beach. In deferring this area the Commission found that, although Proposition S and its limitations on development were a result of a voters initiative, the policies of the LUP were inadequate to achieve the basic Coastal Act goal of maximizing public access and recreation to the State beach and did not ensure that development would not interfere with the public's right of access to the sea.

Therefore, the subject site is not included within a certified LCP and the coastal development permit must be issued by the Commission. As conditioned, the project will not adversely impact coastal access. The Commission, therefore, finds that the project, as conditioned, will be consistent with the Chapter 3 policies of the Coastal Act and will not prejudice the ability of the City to prepare a Land Use Plan and implementation program consistent with the policies of Chapter 3 of the Coastal Act as required by Section 30604(a).

I. California Environmental Quality Act.

Section 13096 of the Commission's administrative regulations requires Commission approval of Coastal Development Permit applications to be supported by a finding showing the application, as conditioned by any conditions of approval, to be consistent with any applicable requirements of the California Environmental Quality Act (CEQA). Section 21080.5(d)(2)(i) of CEQA prohibits a proposed development from being approved if there are feasible alternatives or feasible mitigation measures available, which would substantially lessen any significant adverse impact which the activity may have on the environment.

The proposed project, as conditioned, is consistent with the applicable policies of the Coastal Act. There are no feasible alternatives or mitigation measures available, which would substantially lessen any significant adverse impact, which the activity may have on the environment. Therefore, the proposed project is found consistent with CEQA and the policies of the Coastal Act.
